Top Three Skills: 🛈	*1. 2-5 years of relevant product-related experience in manufacturing or supply chain (e.g. data flows, ordering, logistics, order demand management, invoicing, payments)* *2. Experience working with internal customers to determine requirements* *3. Strong analytical and quantitative skills; proven ability to leverage data in decision making*
Job Description:	Role Type: Individual Contributor As part of a small, passionate and accomplished team, you will bring a software development perspective to aerospace applications of high-performance computing, data transformation, analysis pipelines, and test data visualization. As a Technical Product Manager, you are responsible for the vision, strategy, roadmap, and delivery of systems that automate data collection and analysis processes across all phases of launch vehicle system design, development, testing and operations. This position will directly impact the history of space exploration and will require your dedication and detailed attention towards safe and repeatable spaceflight. Responsibilities: • Own the roadmap for multiple systems and work with end users to advocate on behalf of their needs • 2-5 years of relevant product-related experience

- Deliver results to the business, including defining and executing a roadmap of features and functionality
- Evaluate, implement, and manage commercial software purchases and deployment in a small-to-medium business environment
- Communicate roadmap and plans to management and the broader company
- Work with multiple teams across the organization to define and implement new processes around vehicle engineering, test, verification, and operations
- Work with customers and the development team to design user experiences, including prototypes and mockups
- Perform analytics on data to drive business decisions and iterate on our products
- Anticipate business needs with proposals and system solutions

Qualifications:
- Experience working with software engineering teams in a hands-on capacity as a product manager, engineering manager, or similar role
- Strong analytical and quantitative skills; proven ability to leverage data in decision making
- A demonstrated history of becoming an expert in an unfamiliar domain
- Intense curiosity for understanding the details of our business and how to continuously improve it
- Exceptional organizational and analytical skills and a proven ability to drive complex projects with minimal oversight
- Strong written and verbal interpersonal skills, with the ability to work with and communicate to a diverse user base
- Must be a U.S. citizen or national, U.S. permanent resident (current Green Card holder), or lawfully admitted into the U.S. as a refugee or granted asylum.

Additional Information:
The ideal candidate will have some experience as a Scrum Master, as there are no formal Scrum Masters at Blue. Must have worked with software engineering teams in a hands-on capacity and be comfortable working with the business.

Work Environment:
Casual dress code. Development teams will be co-located at WeWork office in Seattle, but Software Development Managers and Technical Product Managers will need to be onsite in Kent 1-2 days per week to interface with business. Each team will be 9 people, comprised of Manager, TPM and Java Developers.

Interview Information:	1. 30-minute in-person interview with TEKsystems Account Manager 2. 1-hour phone interview with the Blue Origin Director of Enterprise Software (slots open daily from 8-10am)
Who is the Internal/External Customer:	[?] Accounting, Finance, Supply Chain, Manufacturing
Impact to the Internal/External Customer:	[?] There will be improved features and functionality available to these respective internal business users, making their day-to-day work easier and more efficient.
Business Challenge:	Blue Origin has estimated at least 3 months of backlog work related to accounting integration, cost planning, manufacturing software and supply chain software. This work directly impacts their work order routing and inventory location tracking (for example), which is critical to their business operations.
EVP:	[?] This is a great opportunity to be part of a brand new team and contribute to Blue Origin's mission in increasing human access to space. While this engagement is guaranteed for 28 weeks, there may be an opportunity to convert full-time (dependent on performance and need at end of project). "Gradatim Ferocite" = STEP-BY-STEP, FEROCIOUSLY.
Non-Technical Skills:	The ideal candidate will have some experience as a Scrum Master, as there are no formal Scrum Masters at Blue. Must have worked with software engineering teams in a hands-on capacity and be comfortable working with the business.
Why is position open?:	There is a large backlog of work related to supply chain and manufacturing processes, and they need supplemental headcount to help support.
Project Stage/Lifecycle Info:	50-60% of the project is already defined, but there is still quite a lot of TPM work to do so that the developers know what to do.
